FROM: Jon Nance, P.E.
Chief Engineer – Operations

SUBJECT: Erosion and Sedimentation Control
2009 Annual Program Reports

Design _____
S & W _____
Rest Area _____
Vegetation _____
Beautification _____

Attached for your information and distribution are the annual reports prepared by the Land Quality Section of DENR and NCDOT. These reports summarize last year's monitoring period and results of our delegated program annual review.

The attached NCDENR report was presented to the Sedimentation Control Commission on February 18, 2010. The report highlights areas in our program that are functioning well and targets specific areas for improvement. The overall evaluation of the Department's delegation agreement was satisfactory and the Commission extended the delegated program for the ensuing year.

The Commission has asked the Department to provide training in plan preparation with emphasis on District Maintenance staff. Additionally, training is being developed for plan designers and maintenance personnel involved with projects in trout waters. Another focus area will be cut slope scarification and fill slope compaction prior to stabilization with groundcover for operations projects.

Please continue to ensure that enhanced settling techniques utilizing flocculants are used on the Department's land disturbing activities to minimize turbidity at points of stormwater discharge. For additional information on enhanced sediment settling required by DENR, please refer to the link below http://www.ncdot.org/doh/operations/dp_chief_eng/roadside/fieldops/downloads/Files/Chieftmemoenhancedsettling.pdf

Again, thank you for your efforts over the past year to achieve our goal of zero NOV's. I know you will continue to set the same high standards for erosion and sedimentation control compliance.
